

# Question :

## Just Sort

Please read [important information](#) first.

### Description

You are given an unsorted list. Write the code that sorts this list **without** using any library sort functions.

### User Inputs:

- `unsorted_list` : list of unsorted integers

**Warning:** You should **not** take any user input, instead use the variables given to you.

### Outputs:

- Sorted list

**Note:** You can use the `print_map` function provided to print the values

**Warning:** Check the example for output format.

**Warning:** You are **not** allowed to use any imports.

### Examples:

unsorted_list	output
[6, 3, 5, 1, 8, 4, 2]	[1, 2, 3, 4, 5, 6, 8]
[8, 8, 4, 3, 2, 6, 25, 9, 6, 432, 14]	[2, 3, 4, 6, 6, 8, 8, 9, 14, 25, 432]
